(54) PRIMER

(57) Abstract:

PURPOSE: To obtain a primer having excellent adherence to a metal surface coated with, e.g. an acrylic resin or fluororesin coating by incorporating an organosilicon compound having a specific silacyclo ring in the molecule. CONSTITUTION: An organosilicon compound having, per molecule, at least one silacyclo ring selected from among one represented by formula I (wherein R1 is H or an (un)substituted monovalent hydrocarbon group and Y is a single bond or a divalent hydrocarbon group) and ones represented by formula II (e.g. the compound represented by formula III) is mixed as an essential ingredient with an organic solvent and one or more ingredients selected from among a titanium compound (e.g. tetraethoxytitanium), a silane coupling agent (e.g. vinyltriethoxysilane), etc., to produce a primer. This primer is thinly applied to an

adherend and dried to form a primer layer. A layer of, e.g. a silicone elastomer composition curable at room temp. through condensation is then formed thereon and cured.
